The **truth** about data back-up

75% of companies believe their data is safe if they back-up

A company in Hemel Hempstead confidently backed up its data and stored it in a fire safe in the basement. When the building collapsed in the recent Buncefield oil fire disaster, the data lay buried for weeks under thousands of tonnes of rubble.

97% of companies believe their data is safe if they back it up and store it offsite

An IT Managed Services company was waiting for tapes to be transported off site when the Hemel Hempstead oil fire flared up. Tapes for two whole days were lost forever in the fire. The company was forced to issue a statement admitting its ability to service customers had been "temporarily affected", with back-up systems rendered "inoperable".

Leading causes of Data Loss

- 47% caused by Hardware Unavailability
- 32% caused by Human Error
- 14% caused by Software Corruption
- 7% caused by Computer Viruses

"Nearly one in five businesses suffer a major disruption every year. It's a case of when, not if, it will happen ..."

Back-up is no longer enough ...

The OCSL Solution

OCSL's solution is not a managed service, where you depend on someone else, but a hardware and software solution, that you own.

Your data (the heart of your business and your most important strategic asset), is copied in real time from one site to another, so in the event of a disaster your data is safe, down to the last second.

Remember: back-up data is always out of date, by hours or days, from the time of the last successful back-up, to the moment of disaster.

How much does a single day of lost data, lost transactions, cost you?

Does your insurance company insist that your data is replicated to another site? Many companies may find new clauses inserted following the Hemel Hempstead disaster.

Let OCSL help you justify the investment of an in-house data replication solution, either floor-to-floor or site-to-site depending on your risk assessment. And hear about the other businesses we've helped to protect by replicating their data.

Can you afford to wait for disaster to strike your organisation?

Since Hemel, OCSL have been engaged by 3 companies affected by the disaster.

OCSL's specialist team can design & deploy the right replicated solution for your organisation.
