Enablement Framework: Application Assessment Strategy for Cloud-ready applications

Data sheet

Key benefits

- ▶ Avoid the business risks, higher costs and failures of not fully understanding your current applications.
- ▶ Understand how your applications can deliver a better service to your business.
- ▶ Ensure your applications are cloud-ready and utilising the latest technology.
- ▶ Align you move applications to the most cost effective platform.
- ▶ Gain insight so you can move the right applications to the right cloud environment.

Delivering Cloud-ready applications

Many businesses want to gain the advantages of running applications in the Cloud. But as with so much relating to Cloud, how do you identify what to move, how and where to move it to. And how does this fit into your wider strategic roadmap for cloud adoption?

Determining cloud compatibility

Working together, we help you to understand your existing application dependencies. Starting with building a clear picture of all your applications, both the knowns and the unknowns. We look at how they communicate. And if they are able to work in Infrastructure, Platform or Software as a Service cloud models.

Approach

Our consultants challenge the traditional way of approaching your typical line of business applications. We work with you to re-imagine and re-architect your applications. So they are fit for purpose in both the short and long term, without spending vast sums of money to get you there.

Duration - 5 days

1 Day
Envisioning

Review objectives, identify customer focus areas, schedule on-site interviews

1 Day
Discovery

Conduct on-site interviews to gather goals, policies, technologies, and implement discovery tools

1 Day
Assessment

Analyse interview results and compare against modelling tools to determine cloud suitability. Prepare your roadmap based on supportability for platform choice.

2 Days
Reporting

Create written report and provide Executive Briefing summarising findings and roadmap
Deliverables – High level Cloud vision, Executive Briefing, Cloud adoption approach, Roadmap, Recommended approach, Plan and Associated Estimate
