Enablement Framework: Network Assessment Building solid networks for a digital world

Data sheet

Key benefits

- ▶ Gain a comprehensive view of existing service workloads to determine suitability for Cloud
- ▶ Gain a true understanding of the possible
- ▶ Be ready to connect and transform into a multi-cloud world.
- ▶ A clear picture of what's possible, from transitioning a service & product to an operating model integrate cloud technologies
- ▶ Ensure compliance and security

Is your network ready to meet your demand?

Are users able to access and consume resources and applications 24/7, 365 days of the year? Is your network future ready? Are you ready to capitalise on digital?

Future proofing your network

9 times out of 10 the network is overlooked as part of a digital transformation journey. Our experience shows most networks solutions are simply not ready for the future. Taking a fresh perspective will enable you to completely change the game when it comes to networking.

Approach

Through on-site, in-person interviews, a technical examination, assessment toolsets, and a comprehensive Readiness Assessment report we provide a clear summary and useful roadmap on key areas such as secure VPNs, direct and dedicated connections, and cloud platforms.

Duration - 7 days

1 Day
Envisioning

Review objectives, identify customer focus areas, schedule on-site interviews

2 Day
Discovery

Conduct on-site interviews to gather goals, policies, technologies, and implement discovery tools and to include security, wireless and network infrastructure and implement discovery tools

2 Day
Assessment

Analyse interview results and compare against modelling tools and create topology diagrams, health status reports and compliance baselines. Prepare a roadmap based on supportability for cloud platform choice.

2 Days
Reporting

Create written report and provide Executive Briefing summarising findings and roadmap
