

A CANCOM COMPANY

Enablement Framework: Security Assessment Protect and secure your move to the Cloud

Data sheet

Key benefits

- ▶ Detail how your services are configured against threat vulnerabilities and review how your applications and data are protected
- ▶ Clear identification of how to securely move workload to cloud
- ▶ Complex security requirements become clearly defined actions and outcomes
- ▶ A clear picture of what's possible and how to remain compliant

Are you secure for a move to the Cloud?

Number one concern for implementing cloud? Security. How do you safely migrate your IT environments to the cloud? As well as maintain data security and privacy, whilst staying compliant?

Improve your overall security position

Identify the best way to securely move your workloads to the cloud. Whilst retaining control of costs and protecting your most important data and systems. Our key focus is to ensure you can mitigate against the mostly likely and most dangerous threats whilst taking advantage of digital transformation.

Approach

Gain insight, knowledge and confidence to make informed decisions. Through on-site, in-person interviews, a technical examination, assessment toolsets, and an in depth Assessment report we provide a clear summary and useful roadmap on key areas such as compute, storage, security and networking.

Duration - 10 days

1 Day
Envisioning

Review objectives, identify customer focus areas, schedule on-site interviews

3 Day
Discovery

Conduct on-site interviews to gather goals, policies, technologies, and practices across your security programmes

3 Day
Assessment

Analyse interview results and compare against Microsoft Cybersecurity Infrastructure Optimization Maturity Model. Prepare a roadmap based on criticality and impact of findings.

3 Days
Reporting

Create written report and provide Executive Briefing summarising findings and roadmap
