Why OCSL Managed Services?

The world of technology offers a wealth of remarkable options. We'll guide you through them. Agility and flexibility are important, as business changes. We'll help continually push your digital potential and meet your ever-changing needs. More than just a service provider, we'll be your strategic, long term partner.

Security at your front gate

Would you let a stranger walk through the doors to your business and roam free? No! So why let them do the same to your network. Protecting your network is critical, especially in our connected world. Our top level IPS & IDS Service offers the protection you need, with around the clock support from our team, we ensure all traffic going in and out of your network is analysed, and any malicious traffic is stopped and permanently blocked.

Get control of what can be viewed in your business

Our experts can work with you to tailor what can and cannot be viewed online, from file types to site content - many issues come through downloading unknown files from unknown sites. We can help by restricting or analysing content against known signatures to make informed decisions thus helping prevent data loss within your company.

Stopping the bad guys

With a constant stream of new attack methods, it is hard to stay on top and plan, deploy and manage security solutions. Our managed IPS/IDS service is great for businesses who just want security taken care of.

It stops known attacks with its millions of known attack signatures and is constantly updated from various industry leading SOC sources. Zero days can also be blocked by analysing the packet and if deemed not genuine compared to other legitimate traffic, the connection will be dropped. Our experts will report the issue to you and ensure that you are protected.
