- ▶ ISO 27001, 20000, 27018, 9001 & 22301 certified by a UKAS accredited auditor

#### Why OCSL Managed Services?

The world of technology offers a wealth of remarkable options. We'll guide you through them. Agility and flexibility are important, as business changes. We'll help continually push your digital potential and meet your ever-changing needs. More than just a service provider, we'll be your strategic, long term partner.

### Timing is everything

Our proactive patch management service goes beyond just the operating system. Standalone, or coupled with our SIEM service, patching allows for immediate remediation against discovered vulnerabilities. Pushing any new updates published by the vendor to your machines automatically, quickly prevents any exploits that could be present. The strong reporting feature also quickly identifies any missing critical patches or mis configured settings.

### Your own Patch Tuesday

In a world of multiple vendors, patching can be confusing, time consuming and hard to stay on top of. Our Patch Service take this all away, patch management allows for instant patching as soon as vendors release them, you can quickly and efficiently deploy these patches to your systems running Windows, Linux, Mac and more removing vulnerabilities as they come.

### Application patching

It is not only operating systems that expose vulnerabilities, it can also be application based. This will now be an issue of the past because our service not only deploys OS based patches, it also deploys application patches on large vendors such as Adobe, Oracle, Google, Mozilla and more. We have every angle covered!

### Key features

- Patch installation on demand as resources
- OS and Application Patching across windows, Linux and more
- Detailed view of what patches are missing and associated risk
- See what patches are installed on machines

### Compliance and accreditation services

Enhancing our standard patching service, we offer a compliance adherence bolt-on which provides for customisable templates which enable the implementation of required controls to meet and exceed requirements of ISO27001, GDPR and other business requirements. Once implemented the machine posture is checked on a pre-determined basis and any remedial action performed as part of an audit you can generate a clear list of all controls and demonstrate complete adherence with the push of a button!
