

A CANCOM COMPANY

Security Services

Standard Firewall Services

Checkpoint and Cisco devices form the heart of our offering, deployment and ongoing management and monitoring of these devices in line with best practice and compliance requirements for our customers.

[Find out more](#)

Advanced Inspection Service

Our IPS/IDS service protects your network. With around the clock support from our team, we ensure all traffic going in and out of your network is analysed, and any malicious traffic is stopped and permanently blocked.

[Find out more](#)

Penetration Testing

Vulnerability tests are run by the SOC on an agreed customer target list of addresses, run from internal and external sources using a multitude of industry tools and scanners. The testing outputs are combined into a vulnerability report which is shared with the customer and tracked to resolution.

SIEM Service

Our SIEM service provides a unified view of your network by pulling together all your different services and apps used within your infrastructure. We monitor your network to ensure no attacks are happening or trying to happen.

[Find out more](#)

HIPS Service

Our HIPS service places multiple guards behind the front line of each system protecting from internal attacks. If the attack is serious, our highly trained cyber security analysts will remove the machine and investigate the cause.

[Find out more](#)

Patching Service

Our patch management service pushes any new updates published by the vendor to your machines automatically. Deploying the patches as soon as they are released means any exploits taking place will be prevented quickly.
